

## AIX

- Download JRE 1.7 onto the target system
  - 32 bit or 64 bit -  
<http://www.ibm.com/developerworks/java/jdk/aix/service.html>
- Download the Sumo tarball file
  - <https://collectors.sumologic.com/rest/download/tar>
- Download the Tanuki Community PPC wrapper (32/64 bit depending on the OS version)
  - 32 bit -  
<http://wrapper.tanukisoftware.com/download/3.5.26/wrapper-aix-ppc-32-3.5.26.tar.gz>
  - 64 bit -  
<http://wrapper.tanukisoftware.com/download/3.5.26/wrapper-aix-ppc-64-3.5.26.tar.gz>
- Untar the Sumo Logic Collector and the Tanuki wrapper
- Copy the PPC wrapper files to SumoCollector directory
  - Copy wrapper from <tanuki\_files>/bin/wrapper to the root of SumoCollector/
  - Copy libwrapper.a from <tanuki\_files>/lib/wrapper.a to SumoCollector/19.101-10/bin/native/lib/
- Modify SumoCollector/config/wrapper.conf
  - Edit the wrapper.conf file
  - Locate the wrapper.java.command=\${JAVA\_COMMAND\_LOCATION}
  - Change this line

From: wrapper.java.command=/usr/java6\_64/jre/bin/java

To : wrapper.java.command=<your path to JAVA>

- Make sure they are executable

```
chmod ug+x wrapper
```

```
chmod ug+x collector
```

- Create /etc/sumo.conf  
Update sumo.conf as shown below. Where name is the hostname of the your server on which you are installing the collector and the access ID/key are the ones previously created.

```
name=<YOUR HOSTNAME HERE>
```

```
accessid=<YOUR ACCESS ID HERE>
```

```
accesskey=<YOUR ACCESS KEY HERE>
```

- Start the collector.
  - \*nix: sudo /usr/local/SumoCollector/collector ]  
start
